Aisys CS²

Advanced and Sustainable Anaesthesia Care

A true Carestation experience

- Designed for seamless integration with GE CARESCAPE monitors.
- Enhanced with the ultra-compact CARESCAPE Respiratory Modules for comprehensive airway gas analysis of your patients, from neonates to adults.
- Displays breath by breath Patient Spirometry for airway pressure, flow, volume, compliance, PEEP and airway resistance measured at the patient's airway.

Exceptional user interface

- 15" full colour display utilising surface acoustic wave touch screen technology.
- Simplified workflow with configurable 'Quick Picks' for fast agent, oxygen and fresh gas flow adjustments.
- Auto alarm limits with tunnelling alarms to help you optimise alarm management for each patient.

Digitally enabled target control

- Et Control** automatically adjusts fresh gas concentrations to quickly and efficiently achieve and maintain end tidal oxygen and end tidal agent targets.
- Estimated MAC display helps you establish end tidal agent targets.

Decision support for non-automated low flow

• ecoFLOW displays agent consumption to help you mitigate wasteful over-delivery of fresh gas flow and help you avoid delivery of hypoxic mixtures in the circle breathing system during non-automated low-flow anaesthesia.

Shown with PSM and B650 CARESCAPE Monitor

Advanced ventilation for neonates to adults

- ICU-inspired ventilator, with digitally controlled flow valve technology to help achieve set pressures and volumes.
- Wide range of ventilation modes offered, including VCV, PCV, PSVPro, PCV-VG, SIMV VCV, SIMV PCV, CPAP+PSV and SIMV PCV-VG.

Automated Vital Capacity and Cycling lung ventilation procedures

• Designed to help you manage lung ventilation issues during general anaesthesia.

Advanced Breathing System (ABS)

• Specifically designed for low flow to help provide fast gas kinetics for rapid wash-in and wash-out of anaesthetic agent.

Plug & Play connectivity

- Serial interface for legacy connection
- Multiple user configurable Network ports
- Multiple protocols including HL7 and SBX as standard
- Time sync from the hospital network
- FTP function for log data

Et Control**

Using CARESCAPE respiratory module E-sCAiOE or E-sCAiOVE, Et Control allows you to set the desired patient End Tidal Oxygen and End Tidal Agent concentrations. The Aisys CS² then automatically adjusts the fresh gas concentrations to quickly and efficiently achieve and maintain these End Tidal concentrations.

Isoflurane:	OFF, Purge, 0.2 - 2.5%, resolution 0.1%
Sevoflurane:	OFF, Purge, 0.2 - 4.0%, resolution 0.1%
Desflurane:	OFF, Purge, 1.0 - 12.0%, resolution 0.2%

When OFF is selected, no additional agent is added to the system and flows are controlled only based on End Tidal Oxygen concentration.

When Purge is selected, agent is driven out of the system as fast as possible by elevating fresh gas flows.

O ₂ concentration

```
range: 25 to 80%, Max
```

When Max is selected, the Aisys CS² will control the End Tidal Oxygen concentration as high as efficiently possible.

Flow range:	0.3 to 10 L/min, Minimum flow

	0.3 to 6 L/min

* Measurement not valid with O_2 and N_2O mixtures

O_2 concentration range:	21% to 100% (when Air is available)
O ₂ concentration accuracy:	±5% V/V for flows < 1 L/min*
Electronic mixer response time:	±2.5% setting for flows > 1 L/min 500 msec (10% to 90% flow step)
Compensation:	Temperature and atmospheric pressure compensated to standard conditions of 20°C and 101 3 kPa
Hypoxic guard:	Electronic
Materials	

All materials in contact with patient breathing gases are not made with natural rubber latex

Environmental Specifications

System operation	
Temperature:	10° to 35°C/50° to 95°F
Humidity:	15 to 95% relative humidity (non-condensing)
Altitude:	-440 to 3000 m/ 537 to 800 mmHg
System storage	
Temperature:	-25° to 60°C/-13° to 140°F
Humidity:	15 to 95%
Altitude:	-440 to 4880 m/ 425 to 800 mmHg
Oxygen cell storage:	-15° to 50°C/5° to 122°F
	10 to 95% relative humidity 500 to 800 mmHg
Electromagnetic comp	500 to 800 mmHg
Electromagnetic comp Immunity:	500 to 800 mmHg
	500 to 800 mmHg atibility Complies with all requirements

 The stated concentration accuracy may not be met for total flows between 200 and 400 mL/min. At least 21% O₂ will be maintained.

Breathing Circuit Specifications

Operational modes

Breathing circuit is circle mode; SCGO option converts to open circuit mode

Carbon dioxide absorbent canister

Absorbent capacity: 800 g

Integrated expiratory limb water reservoir

Ports and connectors

Exhalation:	22 mm OD ISO/15 mm ID taper
Inhalation:	22 mm OD ISO/15 mm ID taper
Bag port:	22 mm OD/22 mm ID (Australia)
Bag-to-Ventilator switch	

Туре:	Bi-stable
Control:	Controls ventilator and direction
	of breathing gas within the circuit

Integrated Adjustable Pressure Limiting (APL) valve

Range:	0.5 to 70 cmH ₂ O
Range of rotation:	0.5 to 30 cmH ₂ O (0 to 230°) 30 to 70 cmH ₂ O (230 to 330°)

Materials

All materials in contact with exhaled patient gases are autoclavable, except disposable flow sensors, O₂ cell, and Respiratory Modules. (Autoclavable flow sensors optional)

All materials in contact with patient gas are not made with natural rubber latex.

Breathing circuit parameters
